KEY

Diseases:

LEAFROLL:	Yellow Flag
BLACKLEG:	Red Flag
MOSAIC:	Brown Flag (see description below in comment section)
WEAK PLANTS:	Pink Flag (plants < 50% the size of the average plant at reading)
WHITE FLAGS	Cal: Calico
	Chem: Seed-borne herbicide damage
	PLO: Phytoplasma such as Witches broom, Haywire, Purple Top
	VM: Varietal mixture
	OT: Off-type, genetic variation within variety

Comments:

Variety, seed grower, and source (state) is provided solely by the seed receiver. We transfer that information to this book.

There should be a plant every 10-12 inches. Exceptions include: seed lots that were sampled multiple times - each sample is separated by a 5 foot skip within the same row, seed tubers too large for planter, or plant did not emerge.

Plants were VISUALLY read, unless otherwise indicated.

Flags with the number 1 (or no number): indicates the seed lot was read prior to June 26.

Flags with the number 2: indicates the seed lot was read on June 26.

MOSAIC does not necessarily mean the plant has PVY; rather, it is expressing symptoms that are commonly associated with PVY infection.

10+ indicates more than 10 plants in particular seed lot were affected within a specific category. In seed lots with 10+ infected plants, **NOT ALL PLANTS WERE FLAGGED** when displaying symptoms.

Additional copies may be obtained from the Washington State Potato Commission, 108 Interlake RD, Moses Lake, WA 98837, (509)765-8845; or from Dr. Mark Pavek, Washington State University, PO Box 646414, Pullman, WA 99164-6414 (509)335-6861. Electronic copies will also be available at potatoes.wsu.edu.

PLEASE NOTE: Due to less than favorable growing conditions in certain parts of this year's field, many plants are smaller than usual and some have severe rhizoc below the soil surface. Please take this into consideration when viewing the seed lots.
